

GYANA RANJAN BEHERA

Penetration Tester | SOC Analyst | Web Application Security | VAPT | Bug Bounty Hunter

Talcher, Odisha | +91 7008584414 | gyana.tcr20@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Cybersecurity graduate with hands-on experience in Penetration Testing, VAPT, Web Application Security, and SOC operations. Currently working as a Cybersecurity Intern at Labmentix, conducting firewall audits, vulnerability assessments, and web application security testing. Proficient in Burp Suite, Nmap, Metasploit, and Nessus. Familiar with OWASP Top 10, threat detection, and real-world attack techniques. Seeking a full-time opportunity in Penetration Testing or SOC roles where I can grow and make an impact.

ACADEMIC QUALIFICATION

Bachelor of Technology – Computer Science Engineering

CGPA: 8.34 (2022 - 2026)

Synergy Institute of Engineering and Technology, Dhenkanal, Odisha

Higher Secondary Education

Percentage: 84.83% (2022)

Bhargabi Science Residential College, Dhenkanal, Odisha

TECHNICAL SKILLS

- **Offensive Security:** Penetration Testing, VAPT, Web App Security, API Security, Bug Bounty, Recon, Exploitation
 - **SOC & Defensive:** Threat Detection, Incident Response, Log Analysis, Alert Triage, IOC Analysis, SIEM, EDR, MITRE ATT&CK, Threat Hunting, Log Correlation
 - **Vulnerabilities:** OWASP Top 10, SQLi, XSS, CSRF, IDOR, Broken Access Control, CVE Analysis
 - **Tools:** Burp Suite, Nmap, Metasploit, SQLMap, Wireshark, Nessus, OpenVAS, Wazuh, Hydra, Splunk, IBM QRadar, Snort, Zeek, TheHive, MISP
 - **Others:** Python, C, Bash, TCP/IP, Firewall, Zero Trust VPN, Network Protocol Analysis
-

WORK EXPERIENCE

Cybersecurity Intern — Labmentix

(Jun 2026 – Present)

- Conducted firewall rules audit using Linux iptables, configuring allow/deny rules and performing network perimeter defense assessment
- Performed security documentation and gap analysis, identifying misconfigurations and policy weaknesses in network infrastructure

Cybersecurity Intern — CyberDojo

(June – August 2025)

- Configured firewalls and implemented Zero Trust VPN with identity-based segmentation to minimize attack surface
 - Deployed honeypots to actively monitor, detect, and log unauthorized access attempts and suspicious network activity
-

PROJECT

APGS — Advanced Phishing Guard System

GitHub

- Built a phishing detection platform with 4 modules — URL scanning, file scanning, email header analysis, and password strength checking
- Implemented URL analysis engine to detect typosquatting, suspicious patterns, and redirection behavior in real time
- Designed for non-technical users to identify spoofed emails, malicious links, and social engineering attacks easily.

Stack: Python,HTML,CSS,JavaScript

CERTIFICATIONS & ACHIEVEMENTS

- Cybersecurity Job Simulation — Deloitte (Forage)
- AI Certificate — YHills Edutech Pvt. Ltd.
- Cybersecurity Fundamentals — IBM
- TryHackMe — Top 2% Global | 170+ labs | 18 badges
- 3rd Place — BPUT Hackathon 2025
